# SOFT TIP

# UNILAB

## PHIL TAYLOR PURIST®

The precise specification of barrels used by Phil Taylor. Supplied as barrels only in a metallic Micro case, Phil Taylor's original Purist features additional grooves to the back of the barrels for extra grip.

From time to time Team Unicorn players experiment with different barrels and set-ups. We actively support their initiative as part of our Research and Development programme and are pleased to make available the very darts that Team Unicorn players have in their tool-kits.

All Phil Taylor Purist darts are nominal 18g. All up weight will depend upon player configuration of flight and shaft.

Guaranteed Weight darts include a certificate guaranteeing the factory weight of each pointed dart barrel +/- 0.1 gram

## NEW WELCOME TO THE UNILAB!

Research and development is a fundamental part of Unicorn's DNA. Now, for the first time, we're opening up our research facilities to you.

Welcome to The UniLab, the perfect working partnership between Unicorn's nearly 70 years of dart engineering experience and the complex mathematics that govern the actual flight of a dart.

We've teamed up with one of the world's leading individual authorities on flight dynamics to help you optimize your dart set up and improve your averages.

Imagine you were in the market for an aircraft. Would you buy the wings from a jet fighter, the fuselage from a 747 and the engine from a helicopter and expect the whole thing to fly properly? No, of course not - you would buy a complete item confident that the manufacturer had teams of aerodynamicists and engineers who have ensured that every component is optimised to work as part of a unit.

And that's how it should be with darts but, at the point of sale, we can only offer one combination of barrel, flight and shaft. Whilst these components are all tested by our engineers and Team Unicorn, the retail combination may not be perfectly suited to your style.

Until now, the task of individually optimising a dart has been down to your trial and error.

The UniLab now puts you in control.

Go to [www.unicorn-darts.com](http://www.unicorn-darts.com) and click on UniLab. A unique innovation in darts, UniLab uses advanced mathematics to ensure that the Unicorn barrel, shaft and flight are precisely matched to operate as an optimum aerodynamic unit for your particular throwing style, standard and stance.

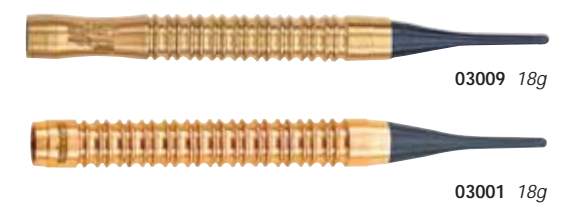

The UniLab helps eliminate many of the aerodynamic effects that cause inaccuracy.

The maths may be complicated (if you're technically inclined, our experts explain some of the detail in the UniBlog on our website) but the program is simple to use and if you take the advice from The UniLab you will step up to the oche confident that the Power of Science is helping Power your Elbow!

## PURIST® GOLD PHIL TAYLOR 90% TUNGSTEN

NEW

**PHIL TAYLOR SAYS...**  
I'm playing more soft tip these days and these are my actual darts.

## PROJECT SIGMA™

As a direct result of our UniLab work, we have developed darts designed at the outset with barrel, shaft and flight all mathematically matched to form an optimum aerodynamic unit, specified to give true flight and greater accuracy.

NEW

- ADDITIONAL ACCURACY FOR THE BETTER PLAYER**
- Steel Tip 97% Tungsten Nickel alloy
